

HTML5 Party 1

Fundamentals

Week 1 – Full-Stack DPP Course

Welcome

Manuel Cubuca

Technical Trainer

manuelc@justit.co.uk

Part 1 Outline

- HTML5 Overview
- The CASE STUDY
- Site Map, Wireframes and Style Tile
- Open a Hosting Account with one.com
- Create a FREE GitHub Account
- Semantic Markup
- HTML5 Strategy
- Build Website Skeleton (hands-on practice)

Part 1 Learning Objectives

- Learners would have a good understanding of:
 - What is HTML5
 - HTML5 new features and semantic elements
 - What are site maps, wireframes and style tile
 - Create webpage structure from scratch
 - Deploy HTML5 semantic tags
 - HTML5 attributes and their use
 - How to build the skeleton of a website

The Web Development Trifecta

- **HTML5** – structures and describes Web page content
- **CSS3** – provides the formatting and "look" of a Web page
- **JavaScript** – adds interactive, dynamic capabilities to Web pages

What is HTML5?

- Is a **collection** of **standards** including CSS3 and JavaScript are part of the new **definition**:
 - HTML5 is the newest version of HTML and replaces HTML4
 - Eliminates the need and use of plugins such as **Flash** and **Silverlight**
 - HTML5 is cross-platform application
 - Visit the W3C website for:

Semantic Markup and Separation of Concerns

Semantic HTML is the use of HTML **markup** to reinforce the **semantics**, or meaning, of the information in web pages and web applications rather than merely to define its presentation or look.

The practice of adding technology in layers to a website to ensure that if all fails, **content** can still be **accessed**.

Separation of concerns

Why Use Semantic Elements

There are many advantages for using Semantic HTML5 Elements:

- Makes the website meaningful to search engines
- Makes the code easier to maintain and readable
- Makes the website more accessible to people with disability

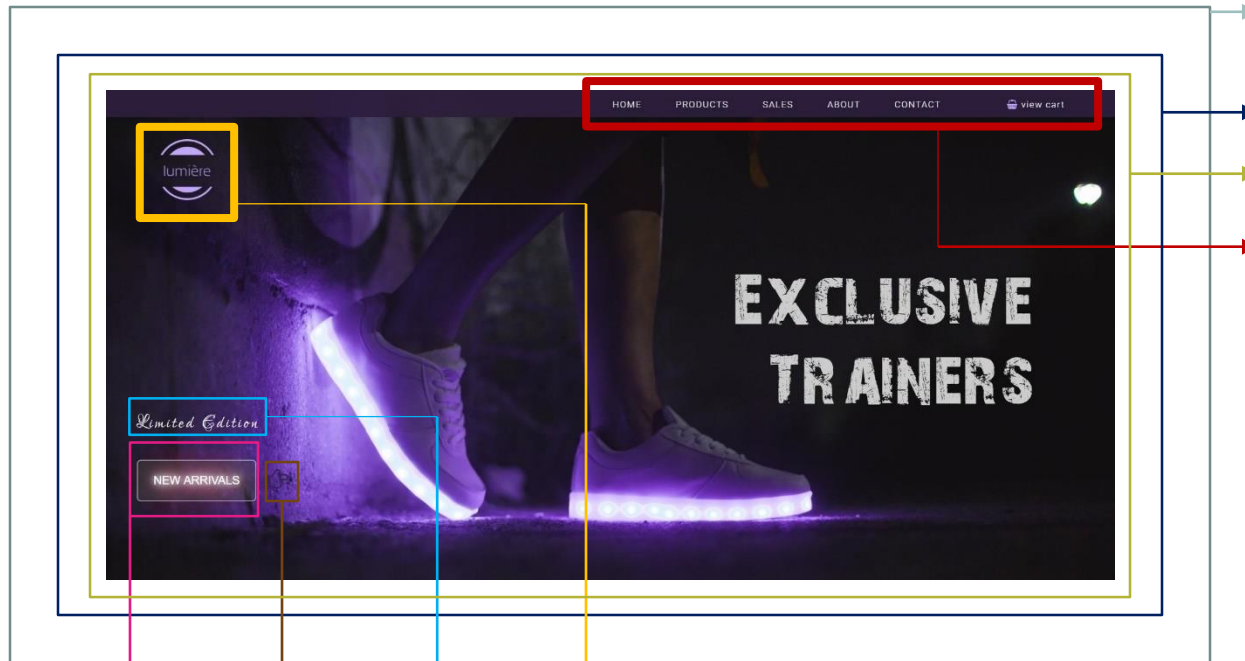

**SEARCH
ENGINES**

**MAINTAIN
CODE**

ACCESSIBILITY

HTML5 Strategy

Tutorial**

Text Editor

The image shows a screenshot of the Brackets website in a web browser. The browser's address bar displays "brackets.io". The website's navigation bar includes links for "Brackets", "Contribute", "API Docs", "Blog", and "Support", along with GitHub and Twitter icons. The main content area features the text "A modern, open source text editor that understands web design." and a prominent blue button labeled "Download Brackets 1.9". Below this button is a link for "Other Downloads".

Below the website screenshot, a preview of the Brackets text editor is shown. The editor window is titled "index.html — Brackets". The left sidebar displays a file explorer with "Working Files" containing "index.html", and a project view showing "brackets.io" with subfolders ".gitignore", "404.html", and "blog.html". The main editor area shows HTML code for a hero section, including a wrapper, a row, and a large column containing a heading and a download button link. A CSS rule for the download button is also visible at the bottom.

```
103 <div id="hero-wrapper">
104   <div id="hero" class="row">
105     <div class="large-12 columns">
106       <h1>Brackets is an open source code editor for web designers and front-end developers. <a class="not
107       <div id="download">
108         <a id="hero-cta-button" href="https://github.com/adobe/brackets/releases/latest" class="large r
